

Project Proposal: **MTR Website Development**

Client: Manufacture Tunisienne des Ressorts (MTR)

Date: July 23, 2025

Project: Development of a professional website with custom quoting and claims processing functionality.

1. Project Scope & Feature Breakdown

This project involves the creation of a professional website for MTR. The site will serve as a digital presence and will include custom functionalities for generating quotes and processing customer claims, supported by a back-end database and administrative panel.

1.1. Core Website Structure & Pages

- **Homepage:** A modern landing page featuring the company slogan "La qualité à chaque ressort, la fiabilité à chaque pas", introducing the company, and showcasing product categories.
- **About Us ("L'entreprise"):** A page detailing the company's history since its founding in 1994, its expertise in spring manufacturing, and its diverse client base.
- **Product Pages ("Produits"):** A main product section with dedicated pages for each category, complete with descriptions and image galleries.
 - Ressorts de Compression
 - Ressorts de Traction
 - Ressorts de Torsion
 - Ressorts de Forme
 - Fil Dressé Coupé
 - Fil Métallique Cambré et Cintré
 - Grilles et Formes Soudées sur Mesure
- **Contact Page:** To include company address, social media links (Facebook, LinkedIn), WhatsApp number, and an embedded Google Map.

1.2. "Demande de Devis" (Request for Quote) System

A custom-built, multi-product quote configurator based on the "Devis.docx" document.

- **Dynamic Quote Forms:** A user-friendly interface for selecting and configuring products from the five main categories: Compression Springs, Traction Springs, Torsion Springs, Straightened/Cut Wire, and Metallic Grilles.
- **Detailed Product Fields:**

- **Compression Springs:** Fields for specifications including diameters (wire, outer, inner) , free length , total coils , material , winding direction , and end-types (ERM, EL, ELM, ERNM).
- **Traction Springs:** Fields for dimensions , coils , materials , ring positions (0° to 270°) , and various hook/loop types.
- **Torsion Springs:** Fields for diameters , lengths , coils , angles , and material.
- **Straightened Wire & Grilles:** Specific forms for custom orders including dimensions, materials, and quantities.
- **File Uploads:** Each form will allow users to attach technical drawings or other documents.
- **Database & Notifications:** All requests will be saved to a database and trigger email notifications to MTR staff.

1.3. Customer "Réclamation" (Complaint) Form

A dedicated form for processing customer complaints as specified in "Formulaire de réclamation pour site web.docx".

- **Specific Fields:** Sections for customer contact details , order information (invoice, delivery note, etc.) , nature of the complaint (non-compliance, transport damage, quantity error, etc.) , and desired resolution (replacement, repair, refund).
- **Photo Upload:** A field for attaching photographic evidence.
- **Database & Notifications:** Submissions will be stored in the database and trigger email alerts.

1.4. Back-End / Administrative Panel

A secure, password-protected area for MTR staff to manage website submissions.

- **Dashboard:** View and manage incoming quote requests and customer complaints.
- **Request & Complaint Management:** Review submission details, download attached files, and track the status of each request.

2. Estimated Project Timeline

The total estimated time for completion is **9 to 14 weeks**.

- **Phase 1: Discovery, Planning & Design (1-2 Weeks)**
 - Finalize technical requirements and create user flow diagrams.
 - Design wireframes and visual mockups for approval.
- **Phase 2: Front-End & Back-End Development (5-8 Weeks)**
 - Code the visual elements of the site and the complex interactive forms.

- Build the server, database, and administrative panel.
 - **Phase 3: Integration & Testing (2-3 Weeks)**
 - Connect the front-end forms to the back-end database.
 - Conduct thorough testing across all devices and browsers.
 - **Phase 4: Deployment & Training (1 Week)**
 - Deploy the website to a live server and populate initial content.
 - Train the MTR team on using the admin panel.
-

3. Estimated Cost

The estimated cost for this project is : ~~3000~~ TND 2600 TND

Additional Costs:

- Annual Domain Name & Web Hosting fees.
- Optional ongoing Website Maintenance & Support contract.
